

Stakeholder Experience

Introduction

This document addresses the concept of stakeholder experience in data analysis and data visualization. Using the Adventure Works case study, it explains how tailoring visualizations to stakeholder needs improves understanding, engagement, and decision-making.

Stakeholder Experience – Questions and Answers

Question: What is the primary goal of data visualization in the data analysis process?

Answer: The primary goal of data visualization is to clearly communicate insights, patterns, and trends in data so stakeholders can understand information quickly and make informed decisions.

Question: Briefly define stakeholder experience in the context of data analysis and visualization.

Answer: Stakeholder experience refers to the needs, preferences, and expectations of stakeholders when they interact with data visualizations and reports.

Question: Explain two reasons why stakeholder experience is important when creating data visualizations.

Answer: First, it ensures that insights are presented in a way that stakeholders can easily understand. Second, it increases the likelihood that stakeholders will use the insights to make effective decisions.

Question: List the six steps in the stakeholder experience process.

Answer:

- 1) Identifying stakeholders
- 2) Defining stakeholder goals
- 3) Choosing the right visualization type
- 4) Designing with stakeholder experience in mind
- 5) Making visualizations interactive
- 6) Testing and iterating.

Question: How can you identify the goals and preferences of different stakeholder groups when designing visualizations?

Answer: By consulting with stakeholders through meetings, interviews, surveys, and reviewing their business objectives and decision-making responsibilities.

Question: What is one challenge you think Adio may face in designing data visualizations that meet the needs of the different stakeholders?

Answer: One challenge is balancing the need for high-level summaries for executives with the detailed insights required by marketing teams and product managers.

Question: Briefly discuss what you need to consider when choosing the right visualization type for stakeholders.

Answer: You need to consider the type of data, the key message to communicate, and the stakeholder's level of expertise and goals to ensure the visualization is clear and meaningful.

Question: What is the purpose of making visualizations interactive?

Answer: The purpose is to allow stakeholders to explore data, filter information, and gain deeper insights based on their specific interests.

Question: A focus group finds a visualization Adio designed difficult to understand. Adio adds more interactive features and updates the design. Which step in the process is Adio engaging in?

Answer: Step 6: Testing and iterating.

Question: In no more than two sentences, discuss how you think stakeholder experience can contribute to improving business outcomes through data-driven decision-making.

Answer: Stakeholder experience ensures insights are clearly understood and trusted by decision-makers. This leads to faster, more confident decisions that improve business performance.

Conclusion

Tailoring data visualizations to stakeholder experience ensures that insights are accessible, relevant, and actionable. By following the six-step process, data analysts can significantly enhance stakeholder understanding and support effective data-driven decision-making.
